APP FUNCTIONS

The image shows a smartphone with the M99 app interface. The screen displays a battery charge indicator at 24%, a target type selection menu (Iron, Foil, Ring, Coin), a discrimination mask scale from -90 to 90, a large digital display showing '99', a depth selection menu (2", 4", 6", 8+), a settings menu icon, and buttons for 'AM', 'GB', and 'PINPOINTER'. Labels with dashed lines point to these features.

AirMD THE SMART BLUETOOTH METAL DETECTOR

The image shows two AirMD metal detectors standing upright on a light-colored surface. A hand is holding a smartphone in the center, which displays the AirMD app interface with a large '99' on the screen. The detectors are black with circular search coils at the base.

4.0 BLUETOOTH CONNECTION

The diagram shows a Bluetooth symbol on the left, followed by icons for a smartphone, a pair of headphones, and a smartwatch, all connected by a dotted line to represent a 4.0 Bluetooth connection.

CONTROLLER

- 1** Volume Knob
- 2** Depth Knob
- 3** Sensitivity Knob

Turn the volume knob right into max. (It's recommended to use headphone if the environment is particularly noisy).

Turn this volume knob right slowly and stop when you hear a sound, and then rotate slowly back into no sound. the higher level of this knob set, the deeper can be detected.

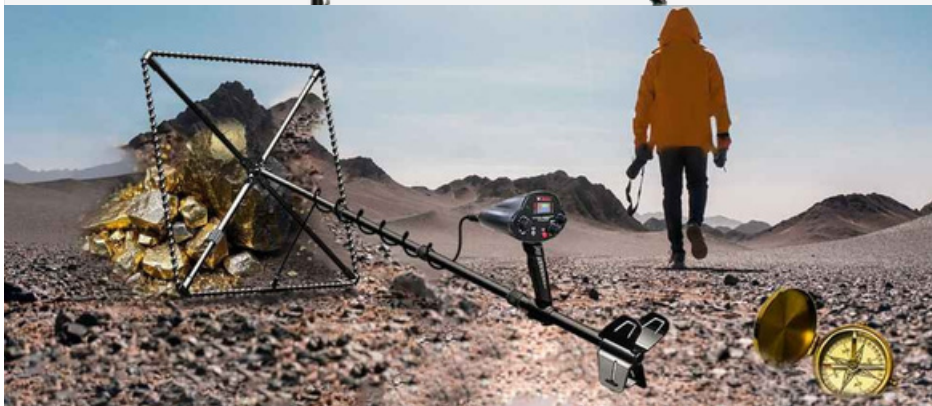

Turn this sensitivity knob right slowly and stop when you hear a sound, and then rotate slowly back until you hear Da Da sound. The higher for this knob set, the deeper can detect.

CONTROLLER

1 Power On/Volume
Turn on the device and adjust the volume of the signal alert sound.

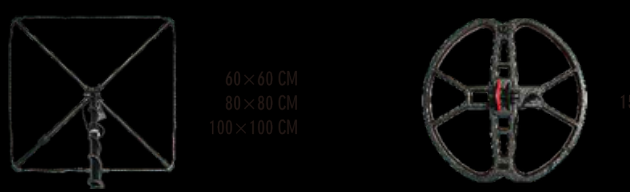

2 Delay
A setting used to cut off signals from small objects during the search. Rotate counterclockwise to the focusing position, enabling the instrument to be in the maximum sensitivity mode while receiving signals from small objects. By rotating clockwise to the focusing position, the maximum "cut-off" mode of the small target signal is displayed, while the sensitivity of the instrument to the large target signal slightly decreases.

3 Threshold
Setting of the trigger threshold for sound and light indication - that is, the lowest critical point of the signal. When the signal is below this value, the instrument will remain silent. The threshold setting directly affects the sensitivity. The adjustment knob should usually be placed near the lowest value, it is recommended to determine the optimal position of the threshold adjustment knob through experimental methods to achieve the highest sensitivity of the instrument.

4 Signal
The sensitivity regulator of the equipment, it is recommended to set the maximum sensitivity. To do this, rotate the knob clockwise until it stops.
